

# OMEGA SD™ MONITOR STYLE 3524 INSTALLATION, OPERATING & MAINTENANCE INSTRUCTIONS

The following is intended to provide the basic instructions for installation, operating and maintenance of the Omega SDTM Monitor. Read and understand these operating instructions before use.

## **PRODUCT RATINGS:**

Maximum Flow: 1250 gpm (4800 lpm) Maximum Pressure: 200 psi (1400 kpa)

## **PRODUCT WARNINGS:**

The reaction force when flowing at the maximum pressure and flow listed above is 900 pounds. The center of the waterway is 8 ¾ inches from the bottom of the inlet flange. Ensure these values plus an appropriate safety factor are used to determine a proper support structure.

MARNING: INSUFFICIENT STRUCTURAL SUPPORT CAN LEAD TO FAILURE, WHICH HAS

POTENTIAL TO CAUSE AN INJURY. THEREFORE, ADDITIONAL STRUCTURAL SUPPORT AT THE INLET MAY BE REQUIRED. NO SUPPORT STRUCTURE IS TO BE

ADDED DIRECTLY TO THE MONITOR.

(Contact Akron Brass Customer Service for assistance.)

riangle WARNING: Charge the unit slowly. Rapid charging may cause a pressure surge which has the

potential to cause an injury or damage the monitor.

MARNING: DO NOT exceed the maximum pressure or flow ratings of the monitor. Exceeding these

ratings has the potential to cause an injury or damage the monitor.

 $\triangle$  WARNING: DO NOT install shutoffs on the outlet of the monitor. Shutoffs increase the potential for

pressure surges due to water hammer, which have the potential to cause injury or

damage the monitor.

♠ WARNING: Drain the monitor after use to prevent "freeze damage".

not over tighten the nozzle onto the unit.

# **MONITOR ATTACHMENT:**

The monitor is to be mounted on the waterway with eight 5/8 inch bolts and nuts of grade five minimum and suitable washers when mounting to a four inch flange. When mounting to a three inch flange, only four bolts, nuts and washers are required.

### **OPERATING INSTRUCTIONS:**

The tiller bar and the upper and lower brake knobs are used to control the monitor. To change the horizontal monitor position toward the "RIGHT" or "LEFT", get a firm grip on the tiller bar handle and turn the lower brake knob counterclockwise until the unit can be easily rotated. Turn the same knob clockwise to lock the unit in the desired horizontal position. To change the vertical monitor position upward or downward, get a firm grip on the tiller bar handle and turn the upper brake knob counterclockwise until the unit can be easily elevated or lowered. Turn the same knob clockwise to lock the unit in the desired elevation position.

### **CAUTIONS:**

Your monitor and nozzle should be inspected prior to and after each use to ensure it is in good operating condition. Periodically, an unanticipated incident occurs where the unit is misused in a manner that is inconsistent with standard operating practices. A partial list of potential misuses includes:

- Operating above maximum rated pressure or flow.
- Not draining and allowing water to freeze in the unit.
- Prolonged exposure to temperatures above 140 degrees F, or below -40 degrees F.
- Operating in a corrosive environment.
- Other misuse that may be unique to your specific environment.

Also, there are many "tell tale" signs that indicate repair is in order, such as:

- A hand wheel that is inoperable or difficult to operate.
- Excessive wear.
- Poor discharge performance.
- · Water leaks.

If any of the above situations are encountered, the monitor should be taken out of service, repaired and tested by a qualified technician before placing it back in service.

## **MAINTENANCE INSTRUCTIONS:**

- Periodically lubricate the grease fittings with Lubriplate Low-Temp or equivalent.

  Inject the lubricant until it becomes visible from the bleeder holes in the center of the swivel plugs.
- Periodically clean grit and dirt from around exterior moving parts.
- Periodically operate all functions of the monitor through its full travel.
- Replace the identification tag if it is worn or damaged.
