

MICA Hand Lamps with Emergency Light Function

Emergency lighting is often forgotten until an accident or power failure happens. In the past it has been fires, today other threats can be far more sinister and this highlights the need for emergency lighting.

Apart from normal lighting function IL-60 EM, IL-80 ATEX EM & ML-800 ATEX EM lamps feature an emergency light operation. During a power failure, the EM-lamp will be lit and shine light on the area in front of it. The lamp automatically turns off when returned to the charger and/or power returns. Best of all, MICA emergency lamps work between 7 to 24 full hours and are entirely rechargeable.

Effective emergency lighting is used to protect property in stores, secure safety of machinery and illuminate passageways. MICA emergency lights are used in airports, harbours, public facilities, factories, military installations, vessels, power plants etc. i.e. in places where high standard emergency lighting is needed. In addition to this special function, Naturally MICA EM lamps can be used normally as an effective flashlights.

Advanced electronics control the halogen bulb/led, protect the battery from deep discharge and issue a warning for low charge of the battery by flashing the beam of light. Different reflectors and special lenses enable a beam of light suitable for all applications. MICA flashlights boast incomparable electronics, versatile functions and a robust structure.
