

Safety Light / Flashlight

Each Safety Light combines a full-size flashlight and a floodlight/flashing safety light in a compact, light-weight package. Two body mounted switches control the lighting functions. The top button powers the tight-beam, long-throw 150 lumens flashlight in either momentary or constant-on mode. The bottom button controls the safety light array with options for constant-on or flashing/alternating (depending on model) operation. Power comes from 4 – AA batteries (included).
